

Superposition vs. Mixture

Frank Rioux

The Wigner function can be used to illustrate the difference between a superposition and a mixture. First consider the following linear superposition of Gaussian functions.

$$\Psi(x) := \exp[-(x - 5)^2] + \exp[-(x + 5)^2]$$

The Wigner distribution for this function is calculated and plotted below.

$$W(x, p) := \int_{-\infty}^{\infty} \left[\exp\left[-\left(x + \frac{s}{2} - 5\right)^2\right] + \exp\left[-\left(x + \frac{s}{2} + 5\right)^2\right] \right] \cdot \exp(i \cdot p \cdot s) \cdot \left[\exp\left[-\left(x - \frac{s}{2} - 5\right)^2\right] + \exp\left[-\left(x - \frac{s}{2} + 5\right)^2\right] \right] ds$$

Integration yields:

$$W(x, p) := \sqrt{2} \cdot \sqrt{\pi} \cdot \left(2 \cdot \exp\left(-2 \cdot x^2 - \frac{1}{2} \cdot p^2\right) \cdot \cos(10 \cdot p) + \exp\left(-2 \cdot x^2 + 20 \cdot x - 50 - \frac{1}{2} \cdot p^2\right) + \exp\left(-2 \cdot x^2 - 20 \cdot x - 50 - \frac{1}{2} \cdot p^2\right) \right)$$

$$N := 50 \quad i := 0 .. N \quad x_i := -7 + \frac{14 \cdot i}{N} \quad j := 0 .. N \quad p_j := -6 + \frac{12 \cdot j}{N} \quad \text{Wigner}_{i,j} := W(x_i, p_j)$$

Wigner

The signature of a superposition is the occurrence of interference fringes as seen in the center of the figure above.

The Wigner function for a classical mixture is the sum of Wigner functions for each member of the mixture. The interference region is clearly absent in the figure shown below.

$$W(x,p) := \int_{-\infty}^{\infty} \exp\left[-\left(x + \frac{s}{2} - 5\right)^2\right] \cdot \exp(i \cdot p \cdot s) \cdot \exp\left[-\left(x - \frac{s}{2} - 5\right)^2\right] ds \dots$$

$$+ \int_{-\infty}^{\infty} \exp\left[-\left(x + \frac{s}{2} + 5\right)^2\right] \cdot \exp(i \cdot p \cdot s) \cdot \exp\left[-\left(x - \frac{s}{2} + 5\right)^2\right] ds$$

Integration yields:

$$W(x,p) := \exp\left(-2 \cdot x^2 + 20 \cdot x - 50 - \frac{1}{2} \cdot p^2\right) \cdot \sqrt{2} \cdot \sqrt{\pi} + \exp\left(-2 \cdot x^2 - 20 \cdot x - 50 - \frac{1}{2} \cdot p^2\right) \cdot \sqrt{2} \cdot \sqrt{\pi}$$

$$N := 100 \quad i := 0 \dots N \quad x_i := -7 + \frac{14 \cdot i}{N} \quad j := 0 \dots N \quad p_j := -6 + \frac{12 \cdot j}{N} \quad \text{Wigner}_{i,j} := W(x_i, p_j)$$
